Companion volume

The companion volume in this series is:

Both of these Readers are part of a course, Communicating Science, that is itself part of the Open University MSc in Science Programme.

The Open University MSc in Science

The Open University MSc in Science is a new 'distance-taught' programme which has been designed for students who want to explore broad scientific topics at postgraduate level. It provides opportunities to pursue some of contemporary science's most pressing issues using innovative teaching methods pioneered by the Open University.

Structure of the MSc

The MSc is a modular degree and students are therefore free to select from a range of options the programme that best fits with their interests and professional goals. The programme will deal in a topic-led way with two main themes or 'strands': Studies of Science and Frontiers in Medical Science.

Courses currently available

Science and the Public
Imaging and Molecules in Medicine
Communicating Science
Issues in Brain and Behaviour
The Project Module

It is also possible to count study of other Master's modules towards the MSc in Science.

OU supported learning

The MSc in Science programme provides great flexibility. Students study at their own pace, in their own time, anywhere in the European Union. They receive specially prepared course materials, and benefit from tutorial support (both electronically and via Day Schools), thus offering them the chance to work with other students.

How to apply

If you would like to register for this programme, or simply find out more information, please write for the MSc in Science prospectus to the Course Reservation Centre, PO Box 724, The Open University, Walton Hall, Milton Keynes, MK7 6ZS, UK. (Telephone 0 (0 44) 1908 653231.) Details can also be viewed on our Web page http://watt.open.ac.uk/SciMSc/mscscl.html
Contents

List of figures viii
List of tables ix
Preface x

PART I
What the public needs to know and why

Introduction
EILEEN SCANLON

1 Knowledges in context
B. WYNNE

2 Science and citizenship
A. IRWIN

PART II
Alternative contexts for communicating science 37

Introduction
ELIZABETH WHITELEGG

3 Opening up science
S. ROSS AND E. SCANLON

4 Science for all citizens: setting the stage for lifelong learning
W. MASSEY
5 Science centres and science learning
   L. RENNE AND T. MCCLAFFERTY

6 Putting learning at the heart of exhibition development:
   a case study of the Wellcome Wing project
   J. GRAHAM AND B. GAMMON

7 Finding evidence of learning in museum settings
   J. GRIFFIN

8 The word and the world: engaging with science in print
   J. TURNLEY

9 Einstein for young people
   R. STANNARD

10 Science fiction and the communication of science
    R. LAMBOURNE

11 Science on television: a coming of age?
    J. BENNETT

PART III
Science and the media

   Introduction
   SIMEON YATES

12 Some problems in conceptualizing the issue of ‘science
   in the media’
   C. DORNAN

13 Mediating science: promotional strategies, media coverage,
   public belief and decision making
   D. MILLER

14 The mystique of science in the press
   D. NELKIN
